

Rig Safe – RFSD – unit.

150hp – adjustable pressure from zero to 36'000 psi with flow's from 5. l/min up to 18. l/min.

Fully rig safe stand alone Reduced Flow Shut down Blast unit.

The RFSD. Unit has been specially created to reduce wash water and waste created during shut down operations when it is necessary to clean the internal of vessels / tanks / pits and separators. The Unit can perform against the most difficult of coatings and scale, ensuring the surface is taken back to a condition ready for inspection. The RFSD is a waste minimization unit and works with ultra low volumes to reduce waste and reduce the amount of fluids that need to be treated and go to landfill. Along with the specially designed cleaning heads the RFSD is the **SMART way to quicker start ups**, by reducing the time a vessel is offline due to shut down and inspection requirements.
